

BATTERY TENDER

Protect Your Electric Vehicle's Battery Health with Our Battery Tender! The Battery Management System (BMS) of your electric vehicle (EV) is always on standby to monitor the health of the main battery and detect whether a charger is connected. This standby mode, however, draws a small amount of current from the 12V car battery.

Why is this important?

In everyday use, this isn't an issue, as the 12V battery gets charged when the main battery is charged. But when the car is not in use for extended periods, the 12V battery can drain over time.

Did you know?

Even if your main battery is fully charged, your EV won't start if the 12V battery is dead! Your car needs this battery to power up the dashboard and internal systems.

Solution: Battery Tender

Our battery tender ensures your 12V battery stays in optimal condition during longer periods of inactivity. It prevents battery drain and premature failure, so your car is always ready to go.

Free Installation

We will install the connector to your battery free of charge. When you plan to go on holiday or won't be using your car for a while, simply connect the battery tender to a 110V or 240V outlet (select the 12V setting, which the charger will remember) and then connect it to the battery connector.

Price: Naf 106,00 including O.B.
